	Expression of Interest	**Motivation (20%)**	**Criteria:** - Motivation / interest for the project - Motivation / understanding of sponsor (if applicable) - Matching of team skills / interests to project	20%		The EoI was not submitted	The EoI falls short in most of the aspects listed and the vast majority of them have been addressed very poorly.	The EoI addresses most of the criteria, but most of them poorly/less than adequately, with some edging towards good.		The EoI addresses most (applicable) criteria adequately to well. Some could be edging towards poor or less than adequate, others towards very good.		The EoI adresses most (applicable) aspects very well to excellent. Some could be leaning towards good, others towards outstanding.		The EoI adresses all aspects in an outstanding manner, with few of them leaning towards excellent.
		Understanding of the brief and context (20%)	**Criteria:** - Understanding of the brief - Analysis and understanding of the wider context of the project - Analysis and understanding of existing products / competitors	20%										
		Preliminary Analysis (30%)	**Criteria:** - Discussion of applicable tools / libraries / methods - Proposed initial approach and motivation - Identification of challenges and issues	30%										
		Management (20%)	**Criteria:** - Project management approach discussed - Preliminary / high level project plan and timescales - Identification of challenges / skills gaps / contingency plans	20%										
		Style (10%)	**Criteria:** - Formatting / structure - Language / grammar / spelling	10%										
	Total:													
	Pitch	**Style & Delivery of the Pitch (25%)**	**Criteria:** - Delivery (clarity / structure) - Team attitude (engaging, motivation, enthusiasm, honesty, ...) - Interaction and contributions of individual team members (unified team?)	25%		Team was absent for the pitch	The pitch falls short in most of the aspects listed and the vast majority of them have been addressed very poorly.	The pitch addresses most of the criteria, but most of them poorly/less than adequately, with some edging towards good.		The pitch addresses most (applicable) criteria adequately to well. Some could be edging towards poor or less than adequate, others towards very good.		The pitch adresses most (applicable) aspects very well to excellent. Some could be leaning towards good, others towards outstanding.		The pitch adresses all aspects in an outstanding manner, with few of them leaning towards excellent.
		Materials (25%)	**Criteria:** - Visual elements (diagrams / flowcharts / animations) - Clarity, spelling, grammar of the slides	25%										
		Content (35%)	**Criteria:** - Tailored to the brief - Technical analysis - Preliminary approach / design - Project management approach	35%										
		Q&A (15%)	**Criteria:** - Concise, to the point, correct	15%										
	Total:													
Interim Report	Report & Prototype	**Project Background & Understanding (10%)**	**Criteria:** - Evidence of **understanding** of the initial brief / specification. - Evidence of own **interpretations / additions / innovations**. - **Depth and context** of the problem presented (e.g. existing products).	10%		No report submited / No description given	(No / limited / irrelevant) understanding, interpretation, reflection of the project, brief, and subject area without contextualisation. No references to relevant other (work, products, applications).		Some relevant understanding, interpretation, reflection of the project, brief, and subject area with limited contextualisation. Detail, clarity, and depth is (missing / poor). (No / limited) consideration of relevant other (work, products, applications) - if applicable.		Good, clear and mostly relevant understanding, interpretation, reflection, contextualisation of the project, brief, and subject area. Most aspects have been addressed in (sufficient / good) depth. Some consideration given to relevant other (work, products, applications) -	Excellent and fully relevant understanding, interpretation, reflection, and contextualisation of the project and brief. All aspects have been addressed in a (structured / concise / factual manner). References to relevant (work, products, applications) - if applicable - have been included and discussed in (good) depth.		
		Requirements & Critical Analysis (15%)	**Criteria:** - Depth / clarity / **coverage** and appropriate **prioritisation of requirements**. - **Motivation / reflection** for **changes to requirements and scope reductions**. - Results of **focus groups / user surveys** (where applicable). - Analysis of **hardware / tools / methods / software libraries** for the project	15%		No report submited / no analysis included	The (description, reflection, analysis) of (requirements, priorities, scope changes, user surveys - if applicable, approaches) is (missing / irrelevant / incomplete / mostly unclear). They do not reflect the (scope, goals) of the project. No attempt to use established methods.		The (description, reflection, analysis) of (requirements, priorities, scope changes, user surveys - if applicable, approaches) is partially complete and has some relevance. Some aspects may be missing and (considerable / some) further clarification is required. Some attempt to use established methods, although largely at hoc.		Mostly (clear, good) description, reflection, analysis of requirements, priorities, scope changes, user surveys – if applicable, approaches. Most key aspects are covered with (sufficient / good) detail. Established methods applied consistently and documented acceptably.	(Comprehensive, systemic, structured, fully relevant) description, reflection, and analysis of requirements, priorities, scope changes, user surveys – if applicable, and approaches. Consistent use of a established approach with clear documentation.		
		Initial software implementation & testing (30%)	**Criteria:** - **Data** storage / management / manipulation / use of (personal) data (if applicable). - **Architecture / design / proof of concept** of the prototype. - Appropriate use of **version control** system (branching / merging). - Evidence of **testing**. - Preliminary inline software documentation	30%		No software submitted / no description (where applicable) given	(No / poor) architecture, design, documentation with (no / limited) implementation and (no / limited) use of (version control, testing, inline documentation). Poor data management – if applicable - meets minimum requirements. Implementation (significantly / slightly) behind and proof of concept in some (requirements / approaches) is missing, leaving considerable uncertainty in the project.		Basic architecture, design, documentation and implementation with (some, inconsistent) use of (version control, testing, inline documentation). Data management – if applicable - meets best practice. Implementation is (on track / ahead) and demonstrates (most / all) necessary technologies, thereby minimising future (risk, uncertainty).		(Good / excellent) architecture, design, documentation with significant progress in implementation and (frequent / consistent) use of (version control, testing, inline documentation). Data management – if applicable - meets best practice. Implementation is (on track / ahead) and demonstrates (most / all) necessary technologies, thereby minimising future (risk, uncertainty).	+ project is on track for the best project prize and to productize it.		
		Project Management & progress (15%)	**Criteria:** - Evidence of effective / appropriate **project management** (Agile, SCRUM, SCRUMBAN, Kanban, etc.). - **Documentation** of sprints / retrospectives / workload management / formal meetings (where applicable). - Use of project management **tools** (Trello / Microsoft Planner / Teams / Slack). - Effective use of **team skills** / skills transfers / cross training. - Professional **attitude** / disciplined / consistent / timely / punctual / autonomous & self organising.	15%		No report submitted or no description given / evidence provided.	(No / very limited) progress and project management with (no / very limited) use of tools (trello / planner / teams / slack / etc.) or documentation (repository). Inefficient use of team skills, skills transfer, and poor team coherence (i.e. team members working in silos).			Some (often irregular) progress with some (ineffective) project management illustrated by irregular use of tools (trello / planner / teams / slack / etc.) and inconsistent documentation (repository). Some consideration given to efficient use of team skills, cross training, and collaboration within the team.	Regular and good progress (disciplined and timely) with effective and well documented project management (trello / planner / teams / slack / document repositories / etc.). Progress is supported by good use of team skills, skills transfer and team coordination.	Consistently excellent progress between meetings by all team members, backed up by consistent use of (trello / planner / teams / slack / git / document repositories / etc.). Outstanding use team skills, skills transfer, team coordination and work. Consideration for contengency planning, risk management. The team is fully autonomous and self organising.		
		Preliminary Reflection (15%)	**Criteria:** - **Tools** / techniques / methods / technical difficulties / testing. - On project **management** / current progress. - **Functioning of the team** so far. - **Forward plan / address concerns** identified. - LSEPI	15%		No report submited / No reflection included.	(No / superficial) reflection on (approaches, progress & management, team functioning, encountered and expected challenges, LSEPI). No (forward, improvement) plan.		Some reflection on (approaches, progress & management, team functioning, encountered and expected challenges, LSEPI), but lacking in (some) detail and depth. Limited consideration of (forward, improvement) plan.		Good reflection on (approaches, progress & management, team functioning, encountered and expected challenges, LSEPI) with some consideration of effective measures to address identified concern.		+Well defined forward plan with reactive and proactive measures to effiently addresses all concerns and mitigate future risks.	
		Style (8%)	**Criteria:** - Accessibility / **clarity & motivation** of the argument / **structure** (e.g. by key parts / components of the project) - Concise / conceptual descriptions / appropriately balanced content / length / depth - **Grammar / spelling / articulation** / formatting / structure / jargon & definitions - Use of graphs / graphics	8%		No report submited	Report is unjustifiable in length & depth (either short or long) OR the right length but inaccessible due to (poor structure & formatting, poor articulation & clarity, inappropriate use of jargon, unbalanced content, typos & grammatical errors, missing visuals & graphics).			In the main, the length & depth of the report is good. The report is mostly accessible and attempts to structure & appropriately format content is successful in parts. The content is mostly clear and articulated. A small number of typos & grammatical mistakes not obscuring the meaning in the main. Some visuals & graphics support the argument where appropriate.		Length & depth have been excellently judged and the arguments are well articulated / clear, supported by the structured & formatting of the document. Consistently good use of jargon, no or very few typos & grammatical mistakes, and excellent use of graphics / visuals to support the content.		
		Resource links (2%)	**Criteria:** - **Links** to document repository / project management documentation (e.g. Trello / Microsoft Planner) / code repository	2%		No report submited / No resource links included.	Resource links are provided but not accessible / wrong.			Some resource links were provided but some supporting documentation may be missing.		Resource links give access to all necessary information.		
		Conclusion & Summary (5%)	**Criteria:** - **summary** of key points and **future plan**	5%		No report submited / No summary & plan included.	Summary and future plan is (not present / irrelevant / partially relevant / superficial), offering (no / limited) added value.				Most key points and future directions identified, succinctly summarised and with good clarity.		All key points and future directions identified. Excellent, representative, and realistic.	
	Total:													
Final Group Reports & Demonstration Video	Main Report	**Project Background & Understanding (12%)**	**Criteria:** - Understanding of the (project, scope, subject area). - Originality - own interpretations and novel additions. - (Discussion, understanding) of relevant (work, products, applications) - if applicable.	12%		No report submitted / no project background description	The (report, team, work) demonstrates very limited understanding of the (project, scope, subject area) and shows no originality. Important aspects are poorly understood. No (discussion, understanding) of relevant (work, products, applications).	The (report, team, work) demonstrates an elementary understanding of the (project, scope, subject area) but lacks originality. The team has grasped some key aspects but lacks general understanding. Limited (discussion, understanding) of relevant (work, products, applications).		The (report, team, work) demonstrates a mostly relevant understanding of the (project, scope, subject area) and shows some originality. Most key aspects are (covered, understood) in sufficient depth with some detail missing. Some (discussion, understanding) of relevant (work, products, applications).	The (report, team, work) demonstrates a deep and fully relevant understanding of the (project, background, subject area) and good originality. All aspects are (covered, understood) with excellent depth and full appreciation of the context. Detailed (consideration, discussion, coverage) of relevant (work, products, applications).	+ (report, team, work) demonstrate an outstanding understanding of related (work, products, applications), including relevant scientific work and consistent referencing.		
		Requirements & Critical Analysis (15%)	**Criteria:** - (Depth, clarity, breadth) of (requirements, critical) analysis. - Discussion of (requirements prioritisation, scope reductions). - (Analysis, discussion, justification) of approaches (e.g. solutions, hardware, tools, methods, libraries). - Discussion of (user surveys, focus groups) – if applicable. Note: some relevant content may be included in the software manual rather than the main report - please consider this.	15%		No report submitted / no discussion of (requirements, critical) analysis	The (requirements, critical) analysis, discussion of (priorities, scope reductions, user surveys) and (analysis , discussion, justification) of approaches is (mostly incomplete / overly brief / highly superficial). The (scope, goals) of the project are not accurately reflected. No systemic analysis or use of established SE approaches.	The (requirements, critical) analysis, discussion of (priorities, scope reductions, user surveys) and (analysis , discussion, justification) of approaches is (partially complete / has some relevance). Key aspects are not covered and considerable further (clarification, justification) is required. Some attempt to systemic analysis and use of established SE methods, although it remains mostly ad hoc and inconsistent.		Mostly (clear, good) (requirements, critical) analysis, discussion of (priorities, scope reductions, user surveys) and (analysis , discussion, justification). Most key points are covered with some depth, but some (detail, justification) is missing. The project (goals, scope) are generally covered with (sufficient / good) depth and breadth. A good attempt to attempt to carry out a systemic analysis using established SE methods.	(Comprehensive, systemic, well structured, fully relevant) (requirements, critical) analysis with a detailed discussion of (priorities, scope reductions, user surveys) and (analysis, justification) of approaches. (Consistent, systemic) use of established SE methods.	+ expertly verified and validated.		
		Project Management & progress (15%)	**Criteria:** - (Efficiency, consistency) of project management (e.g. Agile, SCRUM, SCRUMBAN, Kanban) and usage of management tools (Trello / Microsoft Planner / Jira / Teams / Slack). - Efficient use of (team skills, skills transfers, cross training). - (Quality, consistency) of supporting documentation for (sprints, retrospectives, meetings). - Work ethic, e.g. attitude, discipline, consistency, punctuality, autonomy.	15%		No report submitted / no project management and discussion.	(No / limited) (use, discussion) of (project management, management tools, skills consideration) and little team coordination. Supporting documentation is (missing / mostly incomplete). Consistently poor (work ethic, attitude) across all members, resulting in limited (progress, results).		(No / limited) discussion and (ad hoc / inconsistent) use of (project management, management tools, skills coordination) resulting in an incoherent team. Supporting documentation is (limited / partially incomplete). (Inconsistent, highly variable) progress throughout the year with significant periods of (no, limited) activity.	Frequent and good (management, tools usage, skills coordination). The discussion lacks some (depth, detail) and supporting documentation is insightful but lacks structure. Variable progress throughout the year with short periods of (no, limited) activity.	An (extensive, detailed) discussion with excellent supporting documentation, demonstrating (consistent, systemic) project management and usage of (tools, skills). Supporting documentation is (consistent, well structured, comprehensive). A strong work ethic across (most) team members with consistently strong progress throughout the year.	+ the team became fully self-managed towards the end of the project, requiring very little guidance.		
		Reflection (12%)	**Criteria:** - Technical reflection (methods, choices, difficulties, future directions). - Realisation reflection (achievements, weaknesses, caveats). - Management reflection (approach, efficiency, posterior evaluation & lessons learned, contingency planning).	12%		No report submitted / no reflection.	(Incomplete / highly superficial / non-factual) reflection on (technical, implementation, realisation, management). No discussion of (choices, challenges, caveats, strengths, lessons learned).		Some reflection on (technical, implementation, realisation, management) with significant (parts, information) missing and limited factual information. Poor discussion of (choices, challenges, caveats, strengths, lessons learned).	The reflection covers a good range aspects of the project (technical, implementation, realisation, management). It discusses issues encountered, limitations, weaknesses, strengths, and lessons learned. Detail or clarity is missing in some aspects.	The report covers a detailed reflection on all aspects of the project (technical, implementation, management, and realisation at end of contract). It discusses issues encountered, limitations, weaknesses, strengths, and lessons learned in good detail. There is no obvious information missing.	+ actioning and posterior evaluation of previously identified forward measures (in interim report).		
		Style (6%)	**Criteria:** - Content related (length and depth, motivation of the argument). - Presentation (accessibility & clarity, abstractions & conceptual descriptions, structure, narrative, grammar & spelling, articulation, jargon, visuals, graphics, formatting & layout).	6%		No report submitted.	Report is unjustifiable in length & depth (either to short or long) OR the right length but is generally inaccessible due to poor content (abstractions, motivations) and presentation (accessibility & clarity, structure, narrative, grammar & spelling, articulation, jargon, missing visuals, graphics, formatting & layout).		The report has an appropriate length, but multiple parts are inaccessible due to poor content (abstractions, motivations) and presentation (accessibility & clarity, structure, narrative, grammar & spelling, articulation, jargon, missing visuals, graphics, formatting & layout).	The length, depth & clarity of the report is generally good, however, some obvious improvements in the presentation and content can be made. Grammar and spelling do not obscure the meaning in the main but could be improved. Some visuals & graphics were used to support the (argument, content).	Length & depth have been excellently judged. Arguments are (well-articulated, clear), supported by a clear structure & formatting of the document. Consistently good use of jargon, no or very few typos & grammatical mistakes, and excellent graphics / visuals to support the	+ Outstanding in all aspects (no further improvements needed)		
	Software Manual	**Documentation for software engineer / programmer describing architecture, design, implementation, etc. (25%)**	**Criteria:** - (Focus, presentation) appropriate for (programmer / software engineer)'s use. - Use of established SE (documentation) methods, e.g. use cases, sequence diagrams, activity diagrams, class diagrams, data flow diagrams, entity relationship diagrams. - Content – e.g. project goals, problem description, definitions of jargon, design & architecture, concepts, logical / physical architecture, data storage, frameworks, dependencies, proprietary systems, coding conventions, maintainability conventions, design patterns, testing approaches, installation / build manual, additional online documentation	25%		No software manual submitted.	The software manual is incomplete / unfinished and generally of poor quality. It provides no insights into (architecture, design, algorithms, principles) that underpin the code and focusses mainly on common knowledge. It provides little added value and fails to use established software engineering methods in the presentation. Style, language (grammar / typos), structure, and jargon require significant improvements and frequently obscure the meaning.		The manual gives (limited / some) understanding of the product's implementation (e.g. architecture, design, algorithms, principles), but generally provides limited added value (e.g. content is generic, lacks overview) and fails to use established software engineering methods to support the exposition. Style, language (grammar, typos), structure, and jargon require significant improvements and obscure the meaning.	The manual's focus is mainly on the product's implementation (e.g. architecture, design, algorithms, principles), presented mostly at an appropriate level for an experienced programmer / software engineer. Information in some areas may be missing, is occasionally unclear. There is some (but limited use) use of software engineering methods in the presentation. Style, language (grammar / typos), structure, and inappropriate use of jargon may occasionally obscure the meaning.	A comprehensive manual with a well-judged focus on the product's implementation (e.g. architecture, design, algorithms, principles), presented at an appropriate level for an experienced programmer / software engineer. The manual uses excellent abstractions and conceptual descriptions, supported by good / excellent use of established software engineering methods in the presentation. Style and language meet excellent standards with no / very few grammatical errors, good / clear structure, and appropriate use of	+ supported using additional online documentation (e.g. self-generated, referencing, etc). Software manual resembles commercial standards.		
	User Manual	**Documentation for end user describing / functionality and its use. (15%)**	**Criteria:** - Content and presentation at an appropriate level for the expected user and with correct focus (use of the product). - Examples of content to consider include (where appropriate) goals of the product; installation and configuration manual; getting started; hardware and software requirements; description of functionality; troubleshooting; data gathering/protection; FAQs; caveats; etc. - Style, e.g. structure, layout, graphics, spelling and grammar, media content	15%		No user manual submitted.	The manual is incomplete and fails to introduce essential product functionality in a clear and accessible manner. It requires numerous essential and significant improvements in content, presentation, layout, grammar & spelling, and presentation. No attempt is made to use graphics.		The manual covers only essential functionality of the product with limited / some depth. Content is frequently unclear and pitched at the wrong level. The user manual requires significant improvements in content, presentation, layout, grammar & spelling, and presentation. Content is not supported by graphics.	The manual covers some / most aspects of the product with some / sufficient depth and clarity, however, occasionally is unclear. (Some) Obvious improvements to content, presentation, layout, grammar & spelling, and presentation can be made. Some content could benefit from additional graphics, and some graphics may be of poor quality.	Comprehensive manual covering all aspects of using the product in good / excellent depth and clarity. Content is pitched at the right level for the expected audience and the layout is appropriate. Content is well structured, clear, balanced, easily accessible and supported by high quality graphics.	+displays a level of originality, strong creative content, additional media content.		
	Total:			100%										
Software	Software		**Criteria:** - Use of version control. - Technical achievement. - Implementation and code quality. - Realisation at the end of contract. - Documentation Note: some teams may have included implementation details in the main report that can be of value when	100%		No code submitted.	A poor technical realisation and implementation that fails to meet (many / multiple) key aspects of the agreed (scope, specification). The system design has multiple obvious weaknesses. The use (version control, inline documentation) is almost non-existent. No (unit, system, integration) testing or user validation.		A limited technical realisation and implementation that fails to meet some key aspects of the agreed (scope, specification). The system design has some obvious weaknesses in it. The use (version control, inline documentation) is highly variable. (No / very limited evidence of (unit, system, integration) testing without user validation.	A good technical realisation and implementation that (partially / almost) meets the agreed (scope, specification). The system design may have some weaknesses and the use of (version control, inline documentation) is occasionally inconsistent. Evidence of good levels of (unit, system, integration) testing with some user validation.	A substantial technical realisation and implementation with good / excellent system design that meets the agreed scope / specification, expertly verified. The implementation is of high quality, consistently well documented (inline), and approached systemically (as evidenced by the team's GIT useage). Evidence is provided of comprehensive (unit, system, integration) testing and user validation.	+ the final implementation is highly reliable and meets commercial / production standards.		
	Total:			100%										
Individual Reports	Individual Report		**Criteria:** - (Accuracy, detail, contextualisation) of the role description and (technical, interpersonal) contributions. - Reflection on contributions, project, team functioning, (proactive, reactive) actions, lessons learned, posterior evaluation. - Style. Note: peer review scores are used to scale the group marks based on an individual's contributions according to team members. The evaluation of the individual report therefore mainly focusses on the criteria above, including reflection, rather than, e.g., the technical contributions of the individual (in which case they could get penalised twice). The individual report will however inform the moderation of the peer review marks and scaling factors.	100%		No individual report submitted.	The report is mostly (incomplete / overly brief). It lacks (depth, breadth, contextualisation) in (all / most) areas. It provides little (insights, evidence) into the individual's (role, contributions). It may require comprehensive editing. There is (no / limited) reflection which mostly consists of generic (statements / observations) and adds (no / little) value.		The report is mostly complete. It lacks lacks (focus, depth). It provides limited (insights, evidence, contextualisation) of the individual's role. It fails to highlight key (points, insights). Motivations are mostly (superficial, generic). The reflection is (superficial, lacks relevance) and fails to highlight (proactive, reactive) actions taken to address challenges. There is no posterior evaluation / lessons learned.	The report covers (technical, interpersonal) contributions in some depth with some contextualisation. Detail may be missing. There is limited linking to the project (brief, requirements). The reflection covers the (technical, interpersonal) role and (proactive, reactive) measures to address challenges. There is no posterior evaluation of their success and limited focus on lessons learned.	(Accurate, well articulated, detailed) report covering all (technical, interpersonal) contributions comprehensively and in excellent (depth, breadth). Content is supported by contextual evidence. A (critical, constructive) reflection covering (technical / interpersonal) contributions. The reflection identifies lessons learned and (proactive, reactive) steps to address challenges with limited posterior evaluation of their success. Some minor details may be missing and grammar / spelling could benefit from some minor editing.	+ contributions and reflection is linked to the project (scope, requirements). Detailed posterior evaluation of (proactive, reactive) measures leading to new (insights, lessons) for the future.		
	Total:			100%										
	Peer Review		**Criteria:** - Completeness. - Quality, depth, objectiveness of the motivation. - Insights / understanding of group dynamics	100%		No peer review submitted.	Marks have been included, motivations are mostly (missing, incomplete).		Marks have been included, motivations are overly (brief, repetitive, occasionally missing).	All marks and motivations have been included. Motivations are occasionally (brief, generic, lacking detail).	All marks and motivations have been included. Motivations are (honest, accurate, factual) with good (depth, contextualisation).	+outstanding levels of (detail, accuracy) demonstrating a profound understanding of team dynamics. Motivations consider (strengths, weaknesses) in a constructive manner.		
	Total:			100%										
Demo Day		**Presentation / Demonstration video**	**Criteria:** - Content. - Presentation. - Quality. - Creativeness, originality	50%		No presentation / video.	The presentation / video is unjustifiable in length (too short), provides (no / little) insights into the (goals / importance / implementation / outcomes) of the project. It is generally of poor quality.		The presentation / video is appropriate in length, however provides (limited / superficial) insights and understanding into the (goals / importance / implementation / outcomes) of the project.	The presentation / video illustrates (most) aspects of the project (goals / importance / implementation / outcomes) in (sufficient / good) depth and is generally of good quality. Some detail is missing.	The presentation / video is prepared to a (good / high) standard. The (goals / importance / implementation / outcomes) of the project are covered comprehensively and presented with (good / excellent) clarity.	+ it displays strong levels creativeness & originality.		
		Lab Demonstration / Q&A	**Criteria:** - Functioning of the product / bugs - Achievement - Answers to questions	50%		No demonstration.	The demonstration did not demonstrate the outcomes of the project / was not functioning / showed that substantial parts were not implemented. Answers to questions demonstrated a lack depth (technical / project).		The demo was partially working and gave some indication of the realisations in the project. There were a considerable number of bugs and the answers to questions were generally weak.	Most of the demo was working, and it provides (some / good) insights into the achievements of the projects. (some / most) questions were answered with (some / good clarity).	The demo was fully functional and gave a good understanding of the achievements of the project. The answers to questions were strong, to the point, and demonstrated good levels of technical knowledge / and understanding.	The demonstration was comprehensive, showing strong technical achievements that are fully functional. The team demonstrated a deep technical understanding, and the answers to questions were faultless
